

PALASH JOSHI

AI Engineer & Backend Systems Architect | LLM · RAG · Multi-Agent Systems · Cloud Infrastructure

+91-8982432805 | joshipalash4@gmail.com | Indore, India | [linkedin.com/in/palash-joshi-901656286](https://www.linkedin.com/in/palash-joshi-901656286) | github.com/Palash-Devo7

CORE TECHNICAL SKILLS

LLM Systems & RAG: MCP Query Orchestration, Multi-Agent Systems, Hybrid Retrieval (BM25 + Vector + RRF), RAG Pipelines, LangChain, Prompt Engineering

AI & ML: Embedding Models, Vector Search, Semantic Retrieval, LoRA/PEFT

Languages & Frameworks: Python, JavaScript, FastAPI, Next.js, React, REST APIs

Cloud, Backend & DevOps: Azure (Blob Storage, Key Vault, VMs), Docker, PostgreSQL, Terraform, CI/CD, Nginx, Vercel, n8n, Make.com, Selenium

PROFESSIONAL EXPERIENCE

Founder & AI Engineer — *QuantCortex.in* Mar 2026 – Present

- Founded and shipped a production AI financial research platform for Indian retail investors; acquired 100+ users within 6 weeks of launch.
- Owned full system design end-to-end including hybrid retrieval pipeline, multi-agent forecasting, JWT auth, credit system, and cloud deployment on Vercel and Hostinger VPS.

AI Engineer (Contract) — *NXL (Remote)* Dec 2025 – Feb 2026

- Designed and delivered **AI-Powered SDR Automation System** for a UK-based client; owned full backend architecture from workflow orchestration to LLM personalization logic.
- Integrated CRM platforms, enrichment APIs, and LinkedIn data sources to automate prospect intelligence generation and multi-step outreach sequencing via n8n.
- Engineered LLM-based email and LinkedIn personalization pipelines, boosting outbound response rates from 4–5% to 13% (3× improvement) within one month.

Software Engineer (Full-time) — *GrowwStacks (On-Site)* Feb 2025 – Dec 2025

- Delivered 80+ end-to-end automation and cloud infrastructure projects from concept to production; reduced manual processing time by 60–80% across client workflows using n8n and Make.com.
- Led design of AI-powered RAG system with MCP-driven query routing across 10+ internal data sources; deployed Dockerized FastAPI services on Azure VMs with Terraform-provisioned infrastructure, CI/CD pipelines, and REST/GraphQL API integrations.
- Awarded **Employee of the Month twice** for consistent delivery and impact across AI systems and automation projects.

Software Engineer (Full-time) — *Secret Weapon Trading Solutions (Remote)* Mar 2024 – Feb 2025

- Spearheaded development of 100+ custom trading strategies and technical indicators in Python and Pine Script across multiple timeframes, expanding the team's live strategy library.
- Engineered analytics pipelines tracking 15+ performance metrics across all strategies, cutting manual evaluation time by ~60%.

KEY PROJECTS

QuantCortex — Production AI Financial Research Platform (Live) quantcortex.in

- Launched production AI research platform for BSE-listed equities serving 100+ users; hybrid FinBERT + BM25 + RRF retrieval with 3-layer OCR ingestion and parallel multi-agent (Bull/Bear/Macro) event forecasting reduced financial research time by ~70%.

Tech: Python, FastAPI, Next.js 15, FinBERT, ChromaDB, BM25/RRF, SQLite, Groq LLaMA-3.3-70B, Nginx, Vercel

Role-Based RAG System with MCP-Orchestrated Retrieval

- Developed unified RAG platform aggregating 10+ internal systems with hybrid vector (Pinecone) + SQL retrieval, permission-aware RBAC, and Terraform-managed microservices on Azure VMs.

Tech: Python, FastAPI, PostgreSQL, Pinecone, Azure OpenAI, Docker, Terraform, CI/CD

EDUCATION

Bachelor of Computer Applications (Data Science) — Sage University, Indore **2022 – 2025**

Studied Machine Learning, Artificial Neural Networks, Exploratory Data Analysis, and Database Management. Applied coursework through hands-on projects in AI systems, financial data pipelines, and production backend engineering.
